SWIMWEAR FABRICS

CHIFFON – Combining traditional chiffon with modern technology creates this industry standard chiffon. The anti static feature assists you in creating a natural free-flowing garment to enhance any beautiful range. The perfect fabric for fashionable swimwear cover-ups.

MATT POLYESTER LYCRA – This matt polyester fabric meets the highest quality standards for sublimation. It is hard wearing, quick drying and is extremely durable. Combined with lycra this material creates a crisp matt printed finish, whilst still holding its shape and retention. Perfect for all types of swimwear.

BRIGHT POLYESTER LYCRA - This bright polyester fabric has the same qualities as the matt polyester. This fabric simply has a “shiny” finish not dull.

SUBLI-SPORT LYCRA – This matt polyester fabric also meets the highest quality standards for sublimation. It is a warp knit non transparent fabric containing ceramic core technology. This prevents a “see through” look in turn creating a UV blocking fabric. It also creates a cooling effect by reflecting the heat rays. This fabric is especially suited to swimwear that contain white areas.

AQUALIFE - This matt polyester fabric is ideal for swimwear that is exposed to a chlorine environment as it is chlorine resistant. This fabric dries quickly, is pleasant to wear and prolonged contact with chlorine doesn't cause it to lose its elasticity. It is the perfect solution for high quality sublimated chlorine resistant swimwear.
